VENTURES

Dreamy, AI Run Coach

2026 – Present

Founder and sole builder

- Built a full-stack AI running coach that syncs with Strava, rebuilds the training week around days an athlete can't run, and forecasts race times by blending multiple models (TypeScript, Python, Next.js, Postgres, Anthropic API).
- Designed the deterministic, research-derived training engine and LLM explanation layer after an LLM-first approach proved costly and unreliable; owned product, research, and the model, with Claude Code writing the implementation; 1,985 commits in four months while working full time.
- Designed and ran a 15-runner beta across full race cycles with structured feedback each training block; 14 of 15 rated it above their prior coach or training app.

EDUCATION

The Wharton School, University of Pennsylvania

Philadelphia, PA

Master of Business Administration Candidate

2026 – 2028

- Intended Majors: Artificial Intelligence for Business; Operations, Information and Decisions. GMAT Focus: 775
- Director of Marketing & Community, Wharton AI & Analytics Club; VP of Social & Community, Wharton Run & Tri Club

Brown University

Providence, RI

Bachelor of Science, Applied Mathematics – Economics (Mathematical Finance)

2016 – 2020

- GPA: 3.94. Men's Rugby (USA Rugby Div. 1-AA); Student Conduct Board

PROFESSIONAL EXPERIENCE

Morgan Stanley, Global Investment Office

New York, NY

Investment Strategist, Portfolio Construction & Cross-Asset Strategy

2023 – 2026

- Led team adoption of GenAI across investment research and content production; built eight internal agents, including a house-style writing assistant used by ~20 colleagues.
- Engineered a VBA analytics pipeline spanning 1,000+ slides and 4,000+ data fields across Bloomberg, FactSet, and internal systems; introduced validation controls and shrank turnaround from ~10 days to ~3; still live two years later.
- Shaped market guidance for ~25,000 advisors on a \$5T wealth platform: authored the daily commentary, developed the quantitative frameworks behind model allocations, and overhauled the research format, trimming length ~30%.
- Co-designed a regime-switching stock-vs-bond indicator and a tactical fixed-income framework, validated out of sample; distributed firm-wide and used by several teams to steer research and portfolio strategy.
- Contributing author on published GIC research, including the annual Capital Market Assumptions update and Asset Allocation Considerations for Cryptocurrency.

Portfolio Construction Strategist, Outsourced Chief Investment Office (OCIO)

2022 – 2023

- Replaced assigned style buckets with data-driven style scores, revealing that every active manager had independently underweighted the Magnificent 7: an unintended bet behind over half of one quarter's ~3% underperformance.
- Redesigned trade analytics so sector weights, style tilts, and factor exposures updated instantly, reducing trade-impact evaluation from hours to minutes across 30+ model portfolios supporting \$70B in AUM.

Guggenheim Partners

New York, NY

Investment Analyst, Portfolio Construction Group

2020 – 2022

- Optimized multi-asset fixed income model portfolios on a \$270B AUM platform; ran Monte Carlo simulations to quantify risk, return, and liquidity trade-offs and presented recommendations to portfolio managers.
- Automated monthly analytics end to end (data pulls, cleaning, reconciliation, reporting), cutting errors by over 95%; wrote a tool to rerun historical analytics for backtesting and performance attribution.

Goldman Sachs, Summer Analyst, Market Risk (received return offer)

New York, NY • 2019

ADDITIONAL INFORMATION

- Community: Pace lead for an NYC running community (group workouts, routes, events, member communications); raised \$11,000 for youth mental health and visually impaired children.
- Technical Skills: Python, TypeScript, SQL, Next.js, Postgres, Git/GitHub, Vercel, AI-assisted engineering (Claude Code), advanced Excel/VBA, MATLAB, FactSet, Bloomberg.
- Interests: distance running (3:10 marathon), oil painting, data visualization, skiing, soccer.
